SUMMARY

Applied AI and full-stack engineer who builds production AI products from architecture through launch. Shipped 12+ applications spanning LLM orchestration, streaming agents, structured generation, RAG, multi-tenant SaaS, usage billing, and automated verification using TypeScript, Next.js, Python, PostgreSQL, and cloud infrastructure.

TECHNICAL SKILLS

AI Systems: Vercel AI SDK, OpenRouter, LLM orchestration, structured outputs, tool calling, RAG, agents, embeddings, vector search
Engineering: TypeScript, JavaScript, Python, React, Next.js, Node.js, REST, GraphQL, streaming APIs
Data & Cloud: PostgreSQL, Prisma, Supabase, Redis, Docker, AWS, Vercel, CI/CD
Product Systems: Stripe subscriptions and usage billing, OAuth, Better Auth, multi-tenant SaaS, observability, automated testing

EXPERIENCE

Squid Agent | Creator & Lead Engineer Mar 2026 - Present

- Built and launched a production AI application builder that turns prompts, pasted screenshots, and website references into functional React applications with live preview and iterative editing.
- Architected multi-route LLM orchestration for research, clarification, planning, and code generation using streamed execution, structured outputs, request-scoped capability controls, and requirement-completeness safeguards.
- Owned the end-to-end SaaS platform: multi-model access, authentication, subscriptions and usage billing, per-model cost attribution, project versioning, code export, and automated static and runtime verification.

Phoenix Agency | Founder & Lead AI Engineer Jan 2026 - May 2026

- Shipped AI-enabled SaaS products and reusable production architecture spanning authentication, billing, PostgreSQL data models, deployment, observability, and LLM workflows.
- Led product discovery through launch across client and internal products; the Astra template reached Product Hunt's daily top 15.

Independent Consultant | AI / Full-Stack Engineer (Contract) Oct 2025 - Jan 2026

- Built SlotFlow, a multi-tenant event automation platform with AI-assisted planning, recurring events, public claims and waitlists, organizer controls, and notification workflows.
- Integrated conversational and API-driven automation to reduce repetitive organizer work and improve participant follow-through.

SELECTED PROJECTS

SquidCrawl squidcrawl.dev

- Built an edge-native search and scraping API that converts web pages into clean, LLM-ready content for agents and RAG pipelines without headless-browser overhead for typical HTML.

Trace trace.builders

- Shipped a cross-platform, local-first workspace for running AI agents with filesystem access, MCP integrations, and approval-controlled actions (v2.1.x).

RagBase ragbase.dev

- Shipped private in-browser document Q&A with file and URL ingestion, cited answers, model choice, and no-signup onboarding.

NodeBase github.com/drewsephski/nodebase

- Created an open-source node editor for composing, running, and extending AI workflows and external integrations.
